

110 . The predictive power of genomics in the identification of individuals' future illnesses has in cases led to

- their being deprived of insurance
- their refusing to get life insurance policies
- public support of those free of the genetic condition
- public support of patients having Huntington's disease

Passage 2

There is a great concern in Europe and North America about declining standards of literacy in schools. In Britain, the fact that 30 per cent of 16 year olds have a reading age of 14 or less has helped to prompt massive educational changes. The development of literacy has far-reaching effects on general intellectual development and thus anything which impedes the development of literacy is a serious matter for us all. So the hunt is on for the cause of the decline in literacy. The search so far has focused on socioeconomic factors, or the effectiveness of 'traditional' versus 'modern' teaching techniques.

The fruitless search for the cause of the increase in illiteracy is a tragic example of the saying 'They can't see the wood for the trees'. When teachers use picture books, they are simply continuing a long-established tradition that is accepted without question. And for the past two decades, illustrations in reading primers have become increasingly detailed and obtrusive, while language has become impoverished - sometimes to the point of extinction.

111 . The author believes that researchers have

- failed to detect the main cause of illiteracy
- recommended the use of fewer picture books
- supported the use of more texts in school books
- come to an agreement on causes of illiteracy

112 . The saying mentioned by the author implies that

- students use too many picture books in schools
- more radical educational changes are required to increase literacy
- researchers have dealt superficially with the problem
- low level of literacy is getting more and more common

113 . The main concern about illiteracy is that it

- might stimulate more violence and crime in schools
- may reinforce the attainment of school standards
- prevents the development of cognitive potentials
- leads to the development of more indifferent students

114 . The last sentence of this reading selection indicates that the writer

- is in favor of illustrations in reading primers
- supports continuing traditional approaches
- supports the use of modern teaching techniques
- is critical of the contents of reading books
